

Create a table listing 3 types of printers, 2 types of scanners, and 2 types of webcams, and for each, write one real-life use case (for example: 'Inkjet printer – printing college assignments').

Printers, Scanners, Webcams

Device	Type	Real-life use case
Printer	Inkjet	Printing college assignments and photos
Printer	Laser	Printing large volumes of office documents quickly
Printer	3D printer	Printing prototype models for engineering projects
Scanner	Flatbed	Scanning old photographs or pages from a book
Scanner	Sheet-fed (document)	Quickly scanning multi-page documents for digital filing
Webcam	Built-in laptop webcam	Attending online classes or video calls
Webcam	External USB webcam	Live streaming or professional video conferencing

Draw a labeled diagram showing how a typical home printer connects to a laptop or PC, including the connection interface used (USB, Wi-Fi, or Bluetooth).

List three different connection interfaces (such as USB, Wi-Fi, Bluetooth) used by peripherals like printers, scanners, and webcams, and for each, name one advantage and one disadvantage.

Hint: Think about speed, convenience, and compatibility

Connection Interfaces

Interface	Advantage	Disadvantage
USB	Fast, stable, no setup or pairing needed.	Requires a physical cable; limited by cable length and number of ports
Wi-Fi	Wireless, lets multiple devices connect at one printer allows remote printing	Depends on network strength; can be slower or drop connection if signal is weak
Bluetooth	Easy wireless pairing for nearby devices, low power use	Limited range (about 10 meters) and slower transfer speed than USB or Wi-Fi

Pick any one device you use at home or college (printer, scanner, or webcam). Write step-by-step instructions for how you would connect it to your computer, including what cable or wireless method you would use and any setup steps required.

For home ill use an Inkjet printer with wired setup

1. Connect the USB cable into the printer's USB port and the other end to Laptop/PC.
2. Connect the power cable for the printer and turn on the power, wait for initialization of the printer.
3. The PC/Laptop should detect the device automatically, If the drivers for the printer are not available, we should download and install the same from the manufacturer's website or from the CD if provided.
4. Once detected and drivers installed, we can check if the printer is ready in the control panel/settings - Devices-Printer and scanner and confirm the printer shows up as green.
5. Open any document and click print, select the printer from the list and give the print command.
