

TASK 3:

CPU - Acts like the brain of the computer, controlling the game and handling actions, moving characters, calculations & game rules. A faster CPU helps the game run smoothly.

RAM (Random Access Memory)

RAM is like the computer's short-term memory, it temporarily stores the game information that is needed right now. More RAM helps the game load faster & reduces lag.

GPU (Graphics Processing Unit)

GPU creates & displays the graphics, making the game look better & run more smoothly.
