

Task 1: Authentication & Access Control

Mock Zomato Admin Panel – Login Form

This PDF has a working HTML/JavaScript login form embedded as an attached file (**zomato_admin_login.html**). Since PDF viewers cannot execute web pages directly, the file is attached so it can be extracted and opened in any browser to test it.

How to test it:

1. Open this PDF in **Adobe Acrobat Reader** (attachments do not work in most browser PDF viewers).
2. Click the paperclip / Attachments icon in the left sidebar.
3. Right-click **zomato_admin_login.html** and choose **Save Attachment**.
4. Open the saved file in any web browser (double-click it).
5. Enter the credentials below and click **Log In**.

Test credentials:

Username: **admin** Password: **zomato123**

Expected behaviour:

- Correct username + password → displays "**Access Granted**" in green.
- Any incorrect username or password → displays "**Access Denied**" in red.

Note: Credentials are hardcoded in the JavaScript for this demo/assignment only — not a secure practice for a real production login system.
