

Task 1: Open Windows Defender Firewall settings on your computer and create a new outbound rule to block all traffic from the Spotify desktop app.

Block all outbound traffic from Spotify

1. Open Windows Defender Firewall → search "Windows Defender Firewall" in the Start menu → click Advanced Settings
2. In the left pane, click Outbound Rules.
3. In the right pane, click New Rule...
4. Select Program → Next.
5. Choose This program path → Browse to Spotify's executable file.
6. Click Next → select Block the connection → Next.
7. Under Profile, leave all three checked (Domain, Private, Public) → Next.
8. Give it a name like "Spotify Block Outbound" → Finish.

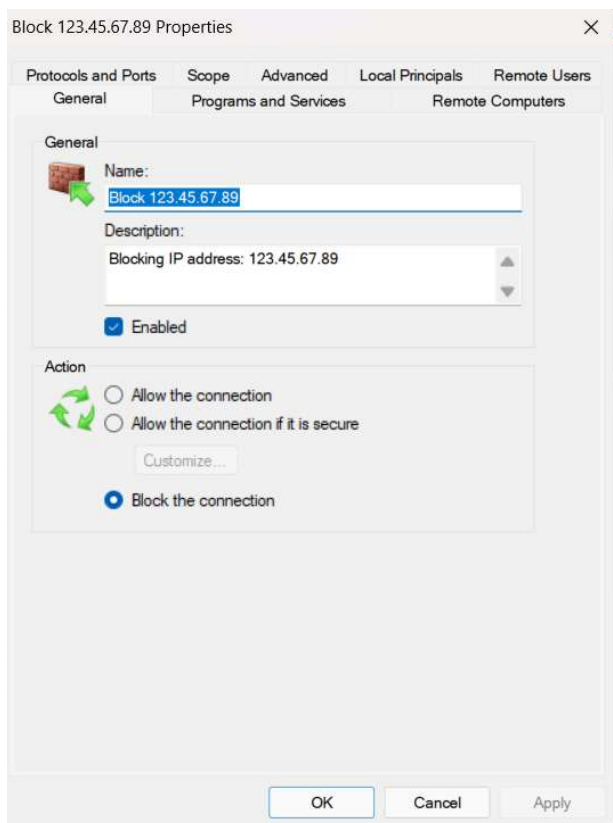

Task 2. Set up an inbound rule in Windows Defender Firewall to allow incoming connections only for Google Chrome on port 443 (HTTPS).

Allow inbound Chrome traffic only on port 443

1. Click Inbound Rules → New Rule in the Advanced Settings window.
2. Choose Program → Next → navigate to the Chrome executable file.
3. After choosing "Allow the connection," click "Next."
4. Leave everything checked under Profile → Next.
5. Give it the name "Chrome HTTPS Inbound" → Complete.
6. To make additional changes to the new rule, double-click it and select the Protocols and Ports tab.
7. Choose Specific Ports → type 443 under Local Port after setting Protocol type to TCP.
8. To save, click OK.

Task 3: Document, step-by-step, how you would block all traffic from a specific IP address (for example, 123.45.67.89) using Windows Defender Firewall. Hint: Use the 'Scope' tab when creating a new rule to specify the IP address.

Block traffic from a specific IP address (e.g., 123.45.67.89)

1. Open Windows Defender Firewall with Advanced Security.
2. Click Inbound Rules - New Rule...
3. Select Custom—Next
4. On the Program screen, leave it as All programs - Next.
5. On the Protocol and Ports screen, leave defaults (Any) - Next.
6. On the Scope screen:
 - Under "Which remote IP addresses does this rule apply to?", select These IP addresses.
 - Click Add, type 123.45.67.89, click OK.
7. Click Next—select Block the connection
8. Leave all profiles checked - Next.
9. Name the rule "Block 123.45.67.89"

Finish.

Task 4: Compare hardware firewalls (like those used in large offices) and software firewalls (like Windows Defender) by listing 3 key differences and a use case for each.

Hardware Firewall	Software Firewall
A physical, standalone device sitting between your network and the internet	A program installed on an individual computer (e.g., Windows Defender Firewall)
Protects an entire network (all devices behind it) at once	Protects only the single device it's installed on
Doesn't use the CPU/RAM of your PC—it has its own dedicated processing hardware	Consumes some of the host computer's CPU and RAM to run
Best for offices or organizations with many devices (computers, printers, servers) needing centralized protection at the network entry point, e.g., a firewall device is placed between the office router and the ISP connection.	Best for individual/personal devices, like a home PC or a laptop used on public Wi-Fi, where single device protection is required.
